AIPULNION®

DC/DC Converter 1/2 Brick ZBD300-110S28CSeries

Typical Features

- Wide input voltage range 2:1
- High efficiency up to 89%
- Low no-load power consumption
- ◆ Operating Temperature: -40°C to +100°C
- High isolation voltage, input-output 3000VAC, input-case 2000VAC

 Protection: Input under voltage, output over voltage, short circuit, over current, over temp

Standard 1/2 brick

Conform to CE standard

ZBD300-110S28C high efficiency 1/2 brick dc-dc converter, rated input voltage 280VDC, output 28V/300W, no minimum load, wide input 185-400VDC, regulated single output, high isolation insulation voltage, allowing operating temperature up to 100 °C, with input under-voltage protection, output over-current, over-voltage, over-temperature, short-circuit protection, remote control and remote compensation, output voltage regulation and other functions.

1. Both the temperature derating curve and the efficiency curve are tested with typical values;

2. The temperature derating curve is tested according to our laboratory test conditions. If the actual environmental conditions used by customers are inconsistent, it is necessary to ensure that the temperature of the aluminum casing of the product does not exceed 105°C, and it can be used within any rated load range.

Design Reference

1.Ripple& Noise

All DC/DC converters of this series are tested according to the test circuit recommended in the following figure before leaving the factory.

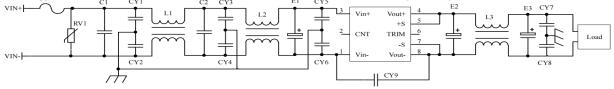

^{capacitor} value Output voltage	E1 (µF)	E2 (µF)	C1(µF)	E3 (µF)
3.3VDC		1000

2. Recommended application circuit

If customer does not use the circuit recommended by our company, please be sure to connect an electrolytic capacitor of at least 100 µF in

parallel at the input end to suppress the possible surge voltage at the input end.

3. Remote control terminal (CNT) control method application recommendation

4. Sense usage and precautions

(1) Without far-end

compensation:

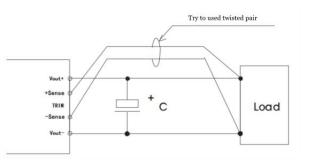

Precautions:

1. Do not use remote compensation, make sure Vout+ and Sense+, Vout- and Sense- are short-circuited;

2. The connection between Vout+ and Sense+, Vout- and Sense- should be as short as possible and close to the pins, otherwise the module may become unstable.

(2)Using remote compensation

Precautions:

1. When the long-end compensation lead is used, the output voltage may be unstable;

2. If remote compensation is used, please use twisted pair or shielded wire, and keep the lead wire as short as possible;

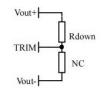

3. Please use wide PCB leads or thick wires between the power module and the load, and keep the line voltage drop below 0.3V to ensure that the power output voltage remains within the specified range;

4. The impedance of the leads may cause the output voltage to oscillate or have larger ripples. Please verify it before use.

5. Use of TRIM and calculation of TRIM resistance

The relationship between output change voltage $\triangle U$ and resistance is as follows:

Vout+

Voltage up regulation: add resistor Rup between Trim and output negative Voltage Down: Add resistor Rdown between Trim and output positive

Rup=50/∆U-5.1KΩ)

Rdown=20* (28-2.5- \triangle U) / \triangle U -5.1 (K Ω)

6. This product does not support the use of direct parallel connection to increase the power. If you need to
